

trailerCam™

Quality assured wireless surveillance solution specially adapted for optimal performance in horse trailers

Specially adapted for increased safety while transporting horses. Robust camera with wide angle lens and night vision enables supervision in all types of horse trailers and in all light conditions.

The 3,6" or 7" LCD-monitor allows you to perfectly see your horse for a safe transport. Complete package and easy to install in every trailer.

HOW IT WORKS

The trailerCam™ wide angle lens covers several horses in the same picture.

With the clear 3,6" or 7" LCD-monitor in the car cabin you can easily see that your horses are safe in the trailer.

LCD MONITOR

The 3,6" or 7" LCD-monitor gives the driver a clear view of the horses inside the trailer. The monitor is easily installed in the wind shield by using the included suction bracket.

The LCD-monitor has 4 channels which means that you can use several cameras in each trailer. It is popular to mount an extra camera at the back of the trailer to get supervision inside the trailer as well as behind while reversing.

The monitor's mirror image function also makes the system suitable as a back up camera system. The monitor is supplied with power by connecting it to the cigarette lighter socket (12-24 V). It further has an AV-in plug for connection to other audio & video equipment when not using your trailer (such as DVD-players).

TRAILERCAMTM

Robust and water proof design (IP66), 5 m of night vision and a wide angle lens (80°) makes the trailerCam a valuable asset in every horse trailer.

The wide angle lens covers largest possible area in all light conditions, from bright day light to pitch black. To install the camera you only have to connect the camera power cable to the back light or the interior light. This is easily done with the included wire connectors. The pictures are transmitted wirelessly between camera and LCD-monitor.

The possibility to change the camera frequency allows you to add an extra camera for supervision behind the trailer while reversing.

FACTS:

- » Water proof and robust high quality camera (IP66)
- » Wide angle camera (80°) suits every trailer
- » Night vision for usage in every light condition
- » Operating temp. -20° to +60°C for usage 12 months/year
- » Wireless transmission of pictures (50 m range)
- » Sony™ CCD chip inside camera for optimal picture quality
- » Easy to install inside your trailer (12 - 24 V)
- » Possibility to use 4 cameras to each monitor
- » Clear 3,6" or 7" LCD-monitor for comfortable supervision
- » AV-plug for connection to other AV-unit (DVD)
- » Complete package including everything you need
- » Thorough installation instructions in English
